Dear JNSV Administrator Committee,

Thank you for the galley proof. In general, we accept every revision you have proposed to the article.

The details are as follows. We also included the handwritten revision as an attachment.

- Yes, you could delete the abstract part denominations
- Table 1 content can be made right-sided
- The spaces in Table 3 is intentional. The (22) did not report sensitivity value, and the word observation belongs to "clinical symptom observation"
- Citation 29 and 30 are mentioned in Table 3. They can be added after "machine-learning data-observation method"
- You could delete the 2nd "f4533"
- The "dia" in 96) stands for diabetes
- The R in (7) should be small
